

CARING FOR YOUR

GRANITE COUNTERTOPS

GRANITE CARE

General Cleaning

Mild dish soap & water are your friends!

Use a mixture of the two for your general cleaning using a soft sponge or dishcloth.

You can also use neutral natural stone cleaners as well.

Heavy detergent cleaners & acids are not recommended with granite as they can etch/damage the stone and it's finish.

Oops!

Clean up your spills quickly to minimize spotting & stains.

Sealing

Granite countertops need to be sealed once a year. The life of your sealer depends upon the cleaners that you use. Ensure you test your natural stone bi-yearly to ensure your sealer is holding up.

Spritz water on your stone - if the water beads up - your sealer is working! If not - it's time to reseal!

Treatments

Technicians are available for cracks/chips or if your granite is dull and needing a lift from a deep clean & a fresh coat of sealer.

Please contact us to schedule a service call to come out to fix and sign up for our yearly maintenance package!
